FOR IMMEDIATE RELEASE

ProComSol Foundation Fieldbus (FF) Smart Communicator for Android

LAKEWOOD, Ohio USA – June 27, 2022 – ProComSol, Ltd (www.procomsol.com) today announced the release of its new Android based Smart Device Communicator Software for Foundation Fieldbus (FF). The software uses the Device Descriptor (DD) for the connected FF device so the user has full access to every Parameter and Method. According to Jeffrey Dobos, President of ProComSol, Ltd, "DevComFF.Droid offers an alternative to the traditional high cost FF Communicators. With a FF communicator that can fit in your pocket, utilizing a modern, App interface, the user has quick and easy access to the FF instrument data. Android devices are continuously improving so the FF communicator performance keeps improving as well."

The Android App (DevComFF.Droid), in combination with the Softing mobiLink multi-protocol communicator (our PN: MOBI-FF), is a full functioned FF Communicator. The entire DD Library for FF devices from the FieldComm Group is included. New DD's can be added very easily by the user. A FF communicator that uses DD's can perform full configurations of Valves, Multi-Variable devices, and complex devices such as Radar Level and Coriolis Flow meters.

DevComFF.Droid allows the user to view and edit device parameters and even save all the device parameters as a PDF file. The PDF file can then be shared with anyone in the world via the mobile network connections available in an Android device. Saving and sharing FF device configuration documentation is now faster and more convenient.

ABOUT US

ProComSol, Ltd was founded in 2005 and has become the leading provider of technically advanced, cost-effective communication solutions to the process automation marketplace. The president, Jeffrey Dobos, has 22+ years' experience developing products with HART technology. The company also designs and manufactures RS232, USB, and Bluetooth HART modems. In combination with the modems, the company's DevCom and DevComFF Smart Communicator App family is used to convert a PC, Tablet, or Smartphone into a full featured, DD based HART or FF Communicator.
